BUSINESS INSIGHTS REPORT

Superstore Sales Data Analysis | Apex Lark Data Analytics Internship — Day 01

1. Executive Summary

This report summarizes an initial review of the Superstore sales dataset, including dataset structure, data-quality checks, business performance measures, and recommended next steps. The dataset contains 9,994 records and 21 columns covering orders, customers, shipping, products, sales, discounts, and profit.

2. Dataset Overview

Item	Description
Records	9,994 data rows, excluding the header
Columns	21 fields
Main fields	Order Date, Ship Date, Customer, Segment, City, Region, Category, Product, Sales, Quantity, Discount, Profit
Analysis focus	Sales and profit performance, category and city comparisons, monthly sales trend, customer/order patterns

3. Data Quality Observations

- Total Columns: 21 columns identified in the dataset.
- Missing Values: No blank cells found.
- Duplicate Records: No duplicate records detected.
- Extra Spaces: 16 product names contain extra spaces.
- Order Date Format: 5,952 order dates have an incorrect date format.
- Ship Date Format: 6,096 ship dates have an incorrect date format.
- Numeric Validation: No numeric validation errors found.

4. Business Insights — Fill in from Excel

The exact metric values were not confirmed in the information available for preparing this document. Fill these fields from the final Business Summary sheet instead of guessing.

Metric / Question	Result from Excel
Total Sales	2297201
Total Profit	286397
Total Quantity Sold	37870
Average Order Value (AOV)	229.858
Top category by sales	Technology
City with highest revenue	New York City
Highest-value order / customer	Sean Miller
Month with highest sales	May
Most-sold product by quantity	Staples

5. Recommendations

1. Monitor category performance: Compare sales and profit by category, and focus on categories that perform well on both measures.

2. Review city-level performance: Use the top-city chart to identify high-revenue markets, then compare profit before deciding where to invest further.

3. Strengthen data-quality checks: Flag extra spaces in product names and validate date and numeric fields on future imports. Keep the original data unchanged and document issues separately.
